---

---

---

---

In this chapter, look for the answers to these questions:

§ Why do people – and nations – choose to be economically interdependent?

§ How can trade make everyone better off?

§ What is absolute advantage?  
What is comparative advantage?  
How are these concepts similar?  
How are they different?

CHAPTER 3 INTERDEPENDENCE AND THE GAINS FROM TRADE
1

---

---

---

---

---

---

---

---

Interdependence

Every day you rely on many people from around the world, most of whom you do not know, to provide you with the goods and services you enjoy.

CHAPTER 3 INTERDEPENDENCE

---

---

---

---

---

---

---

---

## Interdependence

§ One of the Ten Principles from Chapter 1:

***Trade can make everyone better off.***

§ We will now learn why people – and nations – choose to be interdependent, and how they gain from trade.

---

---

---

---

---

---

---

## Our Example

§ Two countries: the U.S. and Japan

§ Two goods: computers and wheat

§ One resource: labor, measured in hours

§ We will look at how much of both goods each country produces and consumes

- if the country chooses to be self-sufficient
- if it trades with the other country

---

---

---

---

---

---

---

## Production Possibilities in the U.S.

§ The U.S. has 50,000 hours of labor available for production, per month.

§ Producing one computer requires 100 hours of labor.

§ Producing one ton of wheat requires 10 hours of labor.

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

#### ACTIVE LEARNING 1: Derive Japan's PPF

Use the following information to draw Japan's PPF.

- § Japan has 30,000 hours of labor available for production, per month.
- § Producing one computer requires 125 hours of labor.
- § Producing one ton of wheat requires 25 hours of labor.

Your graph should measure computers on the horizontal axis.

8

---

---

---

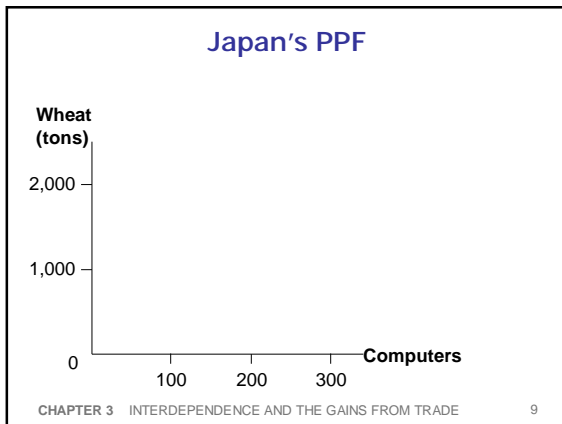

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### Consumption With and Without Trade

§ Without trade,

- U.S. consumers get \_\_\_\_\_ computers and \_\_\_\_\_ tons wheat.
- Japanese consumers get \_\_\_\_\_ computers and \_\_\_\_\_ tons wheat.

§ We will compare consumption without trade to consumption with trade.

§ First, we need to see how much of each good is produced and traded by the two countries.

CHAPTER 3 INTERDEPENDENCE AND THE GAINS FROM TRADE 11

---

---

---

---

---

---

---

**ACTIVE LEARNING 2:**  
**Production under trade**

1. Suppose the U.S. produces 3400 tons of wheat. How many computers would the U.S. be able to produce with its remaining labor? Draw the point representing this combination of computers and wheat on the U.S. PPF.
2. Suppose Japan produces 240 computers. How many tons of wheat would Japan be able to produce with its remaining labor? Draw this point on Japan's PPF.

12

---

---

---

---

---

---

---

**U.S. Production With Trade**

CHAPTER 3 INTERDEPENDENCE AND THE GAINS FROM TRADE

13

---

---

---

---

---

---

---

**Japan's Production With Trade**

CHAPTER 3 INTERDEPENDENCE AND THE GAINS FROM TRADE

14

---

---

---

---

---

---

---

## International Trade

### § Exports:

goods produced domestically and sold abroad

### § Imports:

goods produced abroad and sold domestically

---

---

---

---

---

---

---

### ACTIVE LEARNING 3: Consumption under trade

Suppose the U.S. exports 700 tons of wheat to Japan, and imports 110 computers from Japan. (So, Japan imports 700 tons wheat and exports 110 computers.)

§ How much of each good is consumed in the U.S.? Plot this combination on the U.S. PPF.

§ How much of each good is consumed in Japan? Plot this combination on Japan's PPF.

---

---

---

---

---

---

---

### U.S. Consumption With Trade

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### Trade Makes Both Countries Better Off

U.S.			
	consumption without trade	consumption with trade	gains from trade
computers	250		
wheat	2,500		

Japan			
	consumption without trade	consumption with trade	gains from trade
computers	120		
wheat	600		

CHAPTER 3 INTERDEPENDENCE AND THE GAINS FROM TRADE 19

---

---

---

---

---

---

---

---

### Where Do These Gains Come From?

§ **Absolute advantage:**

§ The U.S. has an absolute advantage in the production of wheat:

§ If each country has an absolute advantage in one good and specializes in that good, then both countries can gain from trade.

CHAPTER 3 INTERDEPENDENCE AND THE GAINS FROM TRADE 20

---

---

---

---

---

---

---

---

### Where Do These Gains Come From?

§ Which country has an absolute advantage in computers?

***So why does Japan specialize in computers?  
Why do both countries gain from trade?***

CHAPTER 3 INTERDEPENDENCE AND THE GAINS FROM TRADE

21

---

---

---

---

---

---

---

### Two Measures of the Cost of a Good

§ Two countries can gain from trade when each specializes in the good it produces at lowest cost.

§ Absolute advantage measures the cost of a good in terms of

§ Recall: Another measure of cost is *opportunity cost*.

§ In our example, the opportunity cost of a computer is

CHAPTER 3 INTERDEPENDENCE AND THE GAINS FROM TRADE

22

---

---

---

---

---

---

---

### Opportunity Cost and Comparative Advantage

§ **Comparative advantage:**

§ Which country has the comparative advantage in computers?

§ To answer this, must determine the opp. cost of a computer in each country.

CHAPTER 3 INTERDEPENDENCE AND THE GAINS FROM TRADE

23

---

---

---

---

---

---

---

### Opportunity Cost and Comparative Advantage

§ The opp. cost of a computer is

- \_\_\_\_ tons of wheat in the U.S., because
- \_\_\_\_ tons of wheat in Japan, because

§ So, \_\_\_\_\_ has a comparative advantage in computers. *Lesson:*

CHAPTER 3 INTERDEPENDENCE AND THE GAINS FROM TRADE

24

---

---

---

---

---

---

---

### Comparative Advantage and Trade

§

§ When each country specializes in the good(s) in which it has a comparative advantage, total production in all countries is higher, the world's "economic pie" is bigger, and all countries can gain from trade.

§ The same applies to individual producers (like the farmer and the rancher) specializing in different goods and trading with each other.

CHAPTER 3 INTERDEPENDENCE AND THE GAINS FROM TRADE

25

---

---

---

---

---

---

---

#### ACTIVE LEARNING 4:

##### Absolute & comparative advantage

Argentina and Brazil each have 10,000 hours of labor per month, and the following technologies:

###### Argentina

- producing one pound coffee requires 2 hours
- producing one bottle wine requires 4 hours

###### Brazil

- producing one pound coffee requires 1 hour
- producing one bottle wine requires 5 hours

Which country has an absolute advantage in the production of coffee? Which country has a comparative advantage in the production of wine?

26

---

---

---

---

---

---

---

#### ACTIVE LEARNING 4: Answers

27

---

---

---

---

---

---

---

#### Unanswered Questions....

- § We made a lot of assumptions about the quantities of each good that each country produces, trades, and consumes, and the price at which the countries trade wheat for computers.
- § In the real world, these quantities and prices would be determined by the preferences of consumers and the technology and resources in both countries.
- § We will begin to study this in the next chapter.
- § For now, though, our goal was merely to see how trade can make everyone better off.
